

DOES YOUR NETWORK MAKE YOU CHOOSE BETWEEN LOW COST OR SECURITY?

With 300 home décor stores in 30 states and a limited IT budget, Kirkland's had to choose between:

TOO COMPLEX Internet-based VPN

- 👎 Public IP addresses are more vulnerable to hackers
- 👎 Robust firewall with strict parameters is required
- 👎 VPN tunnel hacking can compromise the entire network
- 👎 Public-facing services (such as Wi-Fi) can lead to breaches

TOO COSTLY Outsourced VPN

- 👎 Contracted IT services are expensive
- 👎 Approach is vulnerable to network outages
- 👎 Frequent configuration changes are disruptive
- 👎 The network is difficult to implement across the enterprise footprint

PERFECT FIT CyberaONE solution

- 👍 Cost-effective Internet-based VPN solution
- 👍 Flexible, cloud-based approach
- 👍 Micro-segmentation for optimized security
- 👍 Single appliance for multiple network services (such as POS payment, site-to-site VPN, Wi-Fi, and more)

"Cybera has helped Kirkland's develop a standardized network security solution across our enterprise to protect against cybercrime and meet PCI compliance standards."

Get cost savings AND security with Cybera.
